

UNIVERSITI KUALA LUMPUR BUSINESS SCHOOL

FINAL EXAMINATION OCTOBER 2024 SEMESTER

COURSE CODE	: EIB10603
COURSE NAME	: FINANCE 1
PROGRAMME NAME	: BACHELOR IN BUSINESS ADMINISTRATION (HONS)
DATE	: 3 FEBRUARY 2025
TIME	: 9.00 AM – 12.00 PM
DURATION	: 3 HOURS

INSTRUCTIONS TO CANDIDATES

1. Please **CAREFULLY** read the instructions given in the question paper.
2. This question paper has information printed on both sides of the paper.
3. This question paper consists of **FOUR (4) Questions**.
4. Answer **ALL** questions.
5. Please write your answers on the answer booklet provided.
6. All questions must be answered in **English** (any other language is not allowed).
7. **This question paper must not be removed from the examination hall.**
8. Present and future values tables and formulas have been appended for your reference.

THERE ARE TEN (10) PAGES OF QUESTIONS, EXCLUDING THIS PAGE.

INSTRUCTION: Answer ALL questions.

Please use the answer booklet provided.

Question 1

Manyak Masyuk Company is trying to estimate its needs for fund during each of the months covering the last quarter of 2024. The company projected sales and purchases the next months of 2024 are as given below:

Months	Sales (RM)	Purchases (RM)
June	110,000	66,000
July	120,000	72,000
August	130,000	78,000
September	150,000	90,000
October	140,000	84,000
November	120,000	72,000
December	106,000	63,600

The collection of sales are as follows:

- a) 10% of sales were on cash basis
- b) The collections were 40% in the first month
- c) 30% in the second month
- d) 20% in the third months following the sales.

The payment for purchases are as follows:

- a) 15% of which are paid in cash
- b) 65% are paid one month later
- c) The remaining is paid two months after purchase.

The monthly rent and loan payments are RM 4,000 and RM 2,000 respectively, to be paid every month. Utilities for the firm average 2% of sales and are paid in the month of their incurrence. In addition, an amount of RM 3,000 interest will be paid in November 2024 and taxes amounting RM 12,400 payable in December. The company also pays wages and salaries amount to RM 2,000 plus 5% of sales in each month.

The company feels that a minimum cash balance of RM 10,000 should be maintained. Any borrowing will cost 10% annually with the interest paid in the month following the month in which the funds are borrowed. Borrowing takes place at the beginning of the month in which the need for funds arises. Assume that any short-term financing needed to maintain the cash balance is paid off in the month following the month of financing if sufficient funds available.

Prepare a cash budget for the last quarter of 2024. Cash in hand on 30th September is RM 22,520.

(25 marks)

[Total: 25 marks]

Question 2

- a) Mr. Johan is buying an apartment in Penang costing RM400,000. He has made a down payment of RM100,000 and will borrow RM300,000 from the bank. The bank offers a fixed interest rate of 7% per annum for a 5-year tenure with yearly repayments. Provide a summary of the yearly loan amortization table, showing the yearly instalment, total amount paid, total interest paid, and the outstanding balance after each year.

(10 marks)

- b) Mr. Arif plans to deposit RM5,000 annually into a retirement account at the beginning of each year for 25 years. The account earns an interest rate of 16% per annum. Calculate the future value of Mr. Arif's account at the end of 25 years.

(3 marks)

- c) A project is expected to generate cash flows of RM10,000 at the end of the first year, RM12,000 at the end of the second year, RM15,000 at the end of the third year, RM8,000 at the end of the fourth year, RM6,000 at the end of the fifth year, and RM5,000 at the end of the sixth year. The required rate of return for the project is 13% per annum. Calculate the present value of the project's cash flows.

(7 marks)

- d) Ali plans to invest RM15,000 into a fund that offers a 20% annual interest rate. He plans to keep this investment for 15 years. Calculate the future value of Ali's investment at the end of 15 years.

(2 marks)

- e) Explain why money today is worth more than money in the future. Provide two real-world examples to support your explanation.

(3 marks)

[Total: 25 marks]

Question 3

- a) Bob Sdn Bhd is considering four average-risk projects with the following costs and rates of returns:

Project	Cost (RM)	Expected Rate of Return (%)
1	RM 2,000	16
2	RM 3,000	15
3	RM 5,000	13.75
4	RM 2,000	12.5

The company has determined that it can secure financing through debt at an annual interest rate of 10%, denoted as $r_d=10\%$. Considering the corporate tax rate of 30%, the effective after-tax cost of debt will be reduced due to the tax deductibility of interest payments.

Additionally, the company has the option to issue preferred stock, which provides a fixed annual dividend payment of RM 5 per share. This preferred stock is priced at RM 49 per share in the market, indicating a cost of preferred equity derived from the ratio of the dividend to the market price.

For common equity, the company's stock currently trades at RM 36 per share. The next expected annual dividend payment, D_1 , is RM 3.50 per share. Dividends for common stock are anticipated to grow at a constant rate of 6% annually, reflecting the company's sustainable growth expectations.

The company has established a target capital structure that optimally allocates funding sources as follows: 75% of total financing will come from common equity, 15% will be funded through debt, and the remaining 10% will be financed using preferred equity. This allocation reflects the firm's strategic approach to balancing risk, return, and cost

of capital to achieve an optimal weighted average cost of capital (WACC), ensuring long-term financial efficiency and sustainability.

- i. Calculate the cost of each of the capital components?
(4 marks)
- ii. Calculate the Bob Sdn Bhd's WACC?
(4 marks)
- iii. Explain which projects should Bob Sdn Bhd accept based on the above results
(2 marks)
- b) The Gemilang Sdn Bhd's expected dividend D_1 is RM 3.18. The growth rate is 16% and its common stock now sells for RM 36. New stock can be sold to net RM 32.40 per share.
- i. Calculate the Gemilang's cost of retained earnings, r_s ?
(3 marks)
- ii. Calculate the Gemilang's percentage flotation cost, F ?
(3 marks)
- iii. Calculate the Gemilang's cost of new common stock, r_e ?
(4 marks)
- c) Explain on how should the capital structure weighted used to calculate the WACC be determined?
(5 marks)
- [Total: 25 marks]**

Question 4

You are evaluating two independent investment projects, Project Alpha and Project Beta. Both projects have a tenure of 5 years and a discount rate of 11%. Below are the details for the projects:

Project Alpha: The project has an even annual cash flow of RM15,000 for 5 years. The initial investment required is RM50,000.

Project Beta: The project requires an initial investment of RM70,000 and produces uneven annual cash flows over the five years, with RM10,000 in the first year, RM15,000 in the second year, RM20,000 in the third year, RM25,000 in the fourth year, and RM30,000 in the fifth year.

Using the provided information, proceed to evaluate the projects accordingly.

- a) Calculate the payback period for both Project Alpha and Project Beta.
(5 marks)
- b) Calculate the net present value (NPV) of each project using a discount rate of 11%.
(7 marks)
- c) Calculate the profitability index (PI) for each project.
(4 marks)
- d) Calculate the internal rate of return (IRR) for each project.
(5 marks)
- e) Which project should you choose? Justify your decision based on your calculations.
(2 marks)
- f) Briefly explain why net present value (NPV) is considered the most reliable method for evaluating capital budgeting projects.
(2 marks)

[Total: 25 marks]

END OF EXAMINATION PAPER

FORMULA

- $FV = PV (FVIF\ i\ n)$
- $PV = FV (PVIF\ i\ n)$
- $PB = \frac{IO}{Ann\ CF}$
- $PBP = [(n-1)] + [(IO - \text{sum of cash flow before } n) / (\text{cash flow of the year } n)]$
- $NPV = CF (PVIFA\ i\ n) - IO$
- $NPV = \sum [CF (PVIF\ i\ n)] - IO$
- $D_1 = D_0 (1 + g)$
- $V_B = CP (PVIFA) + MV (PVIF)$
- $WACC = \text{Sum of } ([w] \times \text{cost of capital})$
- $NPV = \text{sum of } PV - CF_0$
- $PBP = [(n-1)] + [(IO - \text{sum of cash flow before } n) / (\text{cash flow of the year } n)]$
- $V^*B = \Delta V + VB$
- $V_{AB} = VA + (V^*B - \text{cost of acqn})$
- $V_{AB} = VA + VB + \Delta V$
- $K_i = YTM$
- $K_d = k_i(1 - \text{tax})$
- $K_{ps} = D / (MP - FC)$
- $K_{Re} = [D_1 / (MP)] + g$
- $K_{ncs} = [D_1 / (MP - FC)] + g$
- $Vc/s = \text{Dividend} / k$
- $Vc/s = D_1 / (k - g)$
- $Vc/s = [D_1 / (1+K)^n] + \dots + [D_n / \{ (k-g)(1+k) \}]$
