Fly high with a career in aviation

THE aviation industry plays a significant role in boosting the economic growth of any country as it also supports other sectors such as business, manufacturing, logistics as well as travel and tourism.

Malaysia has identified the aviation industry as a strategic sector that has a wide potential in the country's industrialisation and technological innovation development programmes.

Even though aviation was badly hit due to the recent pandemic crisis, it has proven that the industry does have a promising future.

With the growing number of commercial aircraft, expanded air travel lifestyle, increased demand of the freight movement and the future government's plan for urban air transport, the industry is now experiencing full recovery.

A career in aviation is diverse as the

spectrum of the aviation industry ranges from manufacturing, maintenance repair & overhaul (MRO), airlines, airport, crew and piloting, air traffic operation, continuing airworthiness, ground handling activities such as air cargo operation and airline catering, as well as general aviation.

Universiti Kuala Lumpur Malaysian Institute of Aviation Technology (UniKL MIAT) offers, among others, bachelor's degree in Aviation Management.

Having recognised the importance of future aviation management personnel, the industry and fresh graduates are welcome to join the newly "designed and developed" master's programme; the Master in Aviation Management, which will be offered very soon.
