

**UNIVERSITI KUALA LUMPUR**  
**KAMPUS CAWANGAN MALAYSIAN SPANISH INSTITUTE**

---

**FINAL EXAMINATION**  
**JULY 2023 SEMESTER**

---

**COURSE CODE** : SCB 47603  
**COURSE NAME** : AUTOMOTIVE AERODYNAMICS  
**PROGRAMME LEVEL** : BACHELOR  
**DATE** : 25 SEPTEMBER 2023  
**TIME** : 9.00 AM – 12.00 PM  
**DURATION** : 3 HOURS

---

**INSTRUCTIONS TO CANDIDATES**

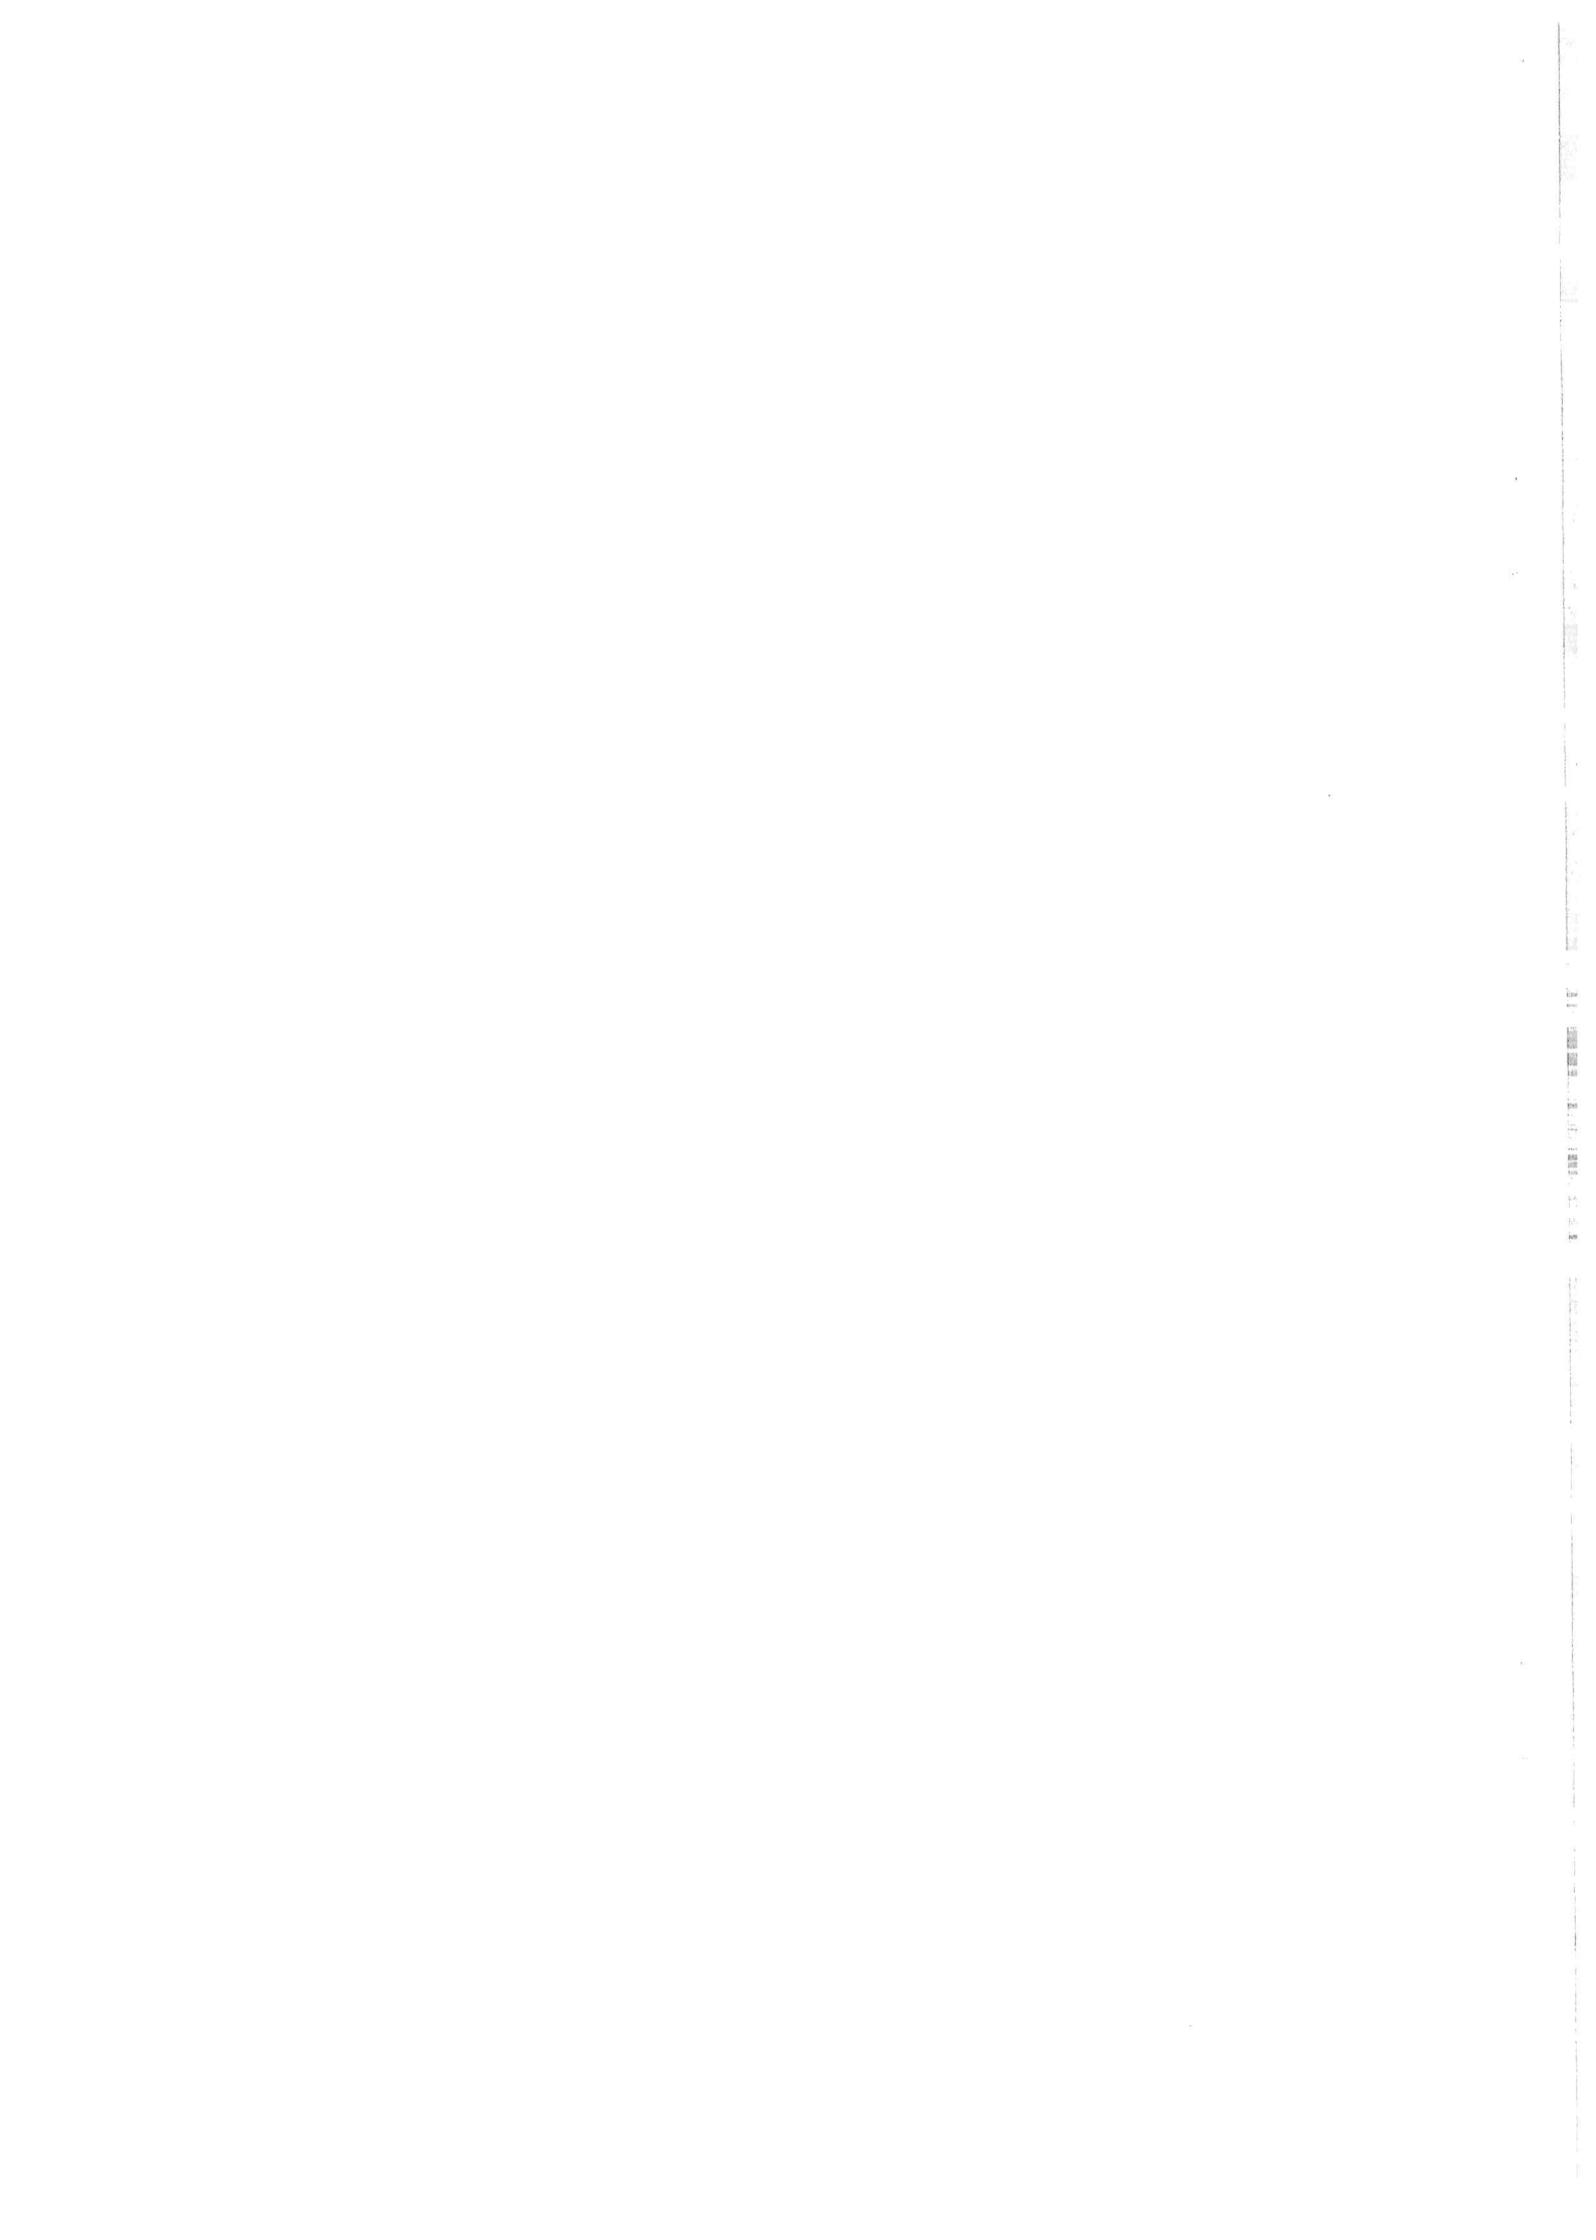

---

1. Please **CAREFULLY** read the instructions given in the question paper.
2. This question paper has information printed on both sides of the paper.
3. Answer only **FOUR (4)** questions.
4. Please write your answers on answer booklet provided.
5. Answer all questions in English language **ONLY**.
6. List of formulae has been appended for your reference.

---

**THERE ARE 7 PAGES OF QUESTIONS EXCLUDING THIS PAGE.**

---

**INSTRUCTION: Answer only FOUR (4) questions only.**

**Please use the answer booklet provided.**

**Question 1**

(a) Describe the difference between pressure drag and skin friction drag. Sketch the expected flow visualization between both plates shown in Figure 1. Properly label the location of low pressure and high pressure.

- i. flat plate parallel to fluid flow
- ii. flat plate perpendicular to fluid flow

(8 marks)

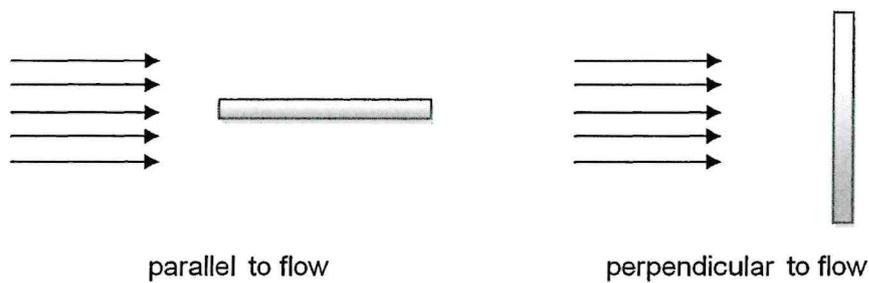

Figure 1

(b) Using your knowledge on flow field visualization surrounding a vehicle, sketch the typical 2D centre flow field visualization for the vehicle shown in Figure 2. Label properly the locations of:

- i. flow separation,
- ii. boundary layers,
- iii. points of reattachment, and
- iv. vortices or wakes

(8 marks)

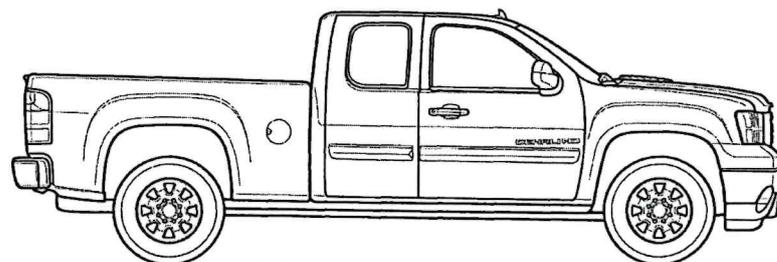

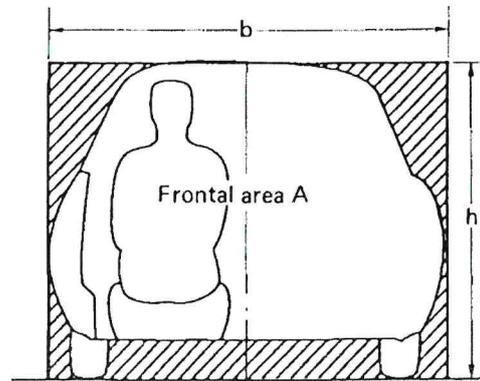

Figure 2

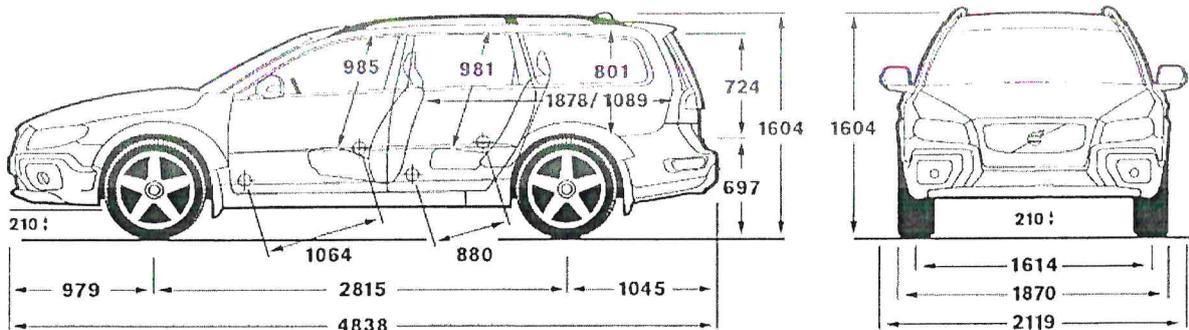

(c) Determine the drag coefficient ( $C_D$ ) of a car in a wind tunnel shown in Figure 3 with airspeed of 110 km/h wind velocity if the following data were achieved.

(9 marks)

- Wind velocity = 110 km/h
- Drag force = 550 N
- Air Temperature = 35 °C
- Air Pressure = 87 kPa
- Gas Constant = 287 J K<sup>-1</sup> kg<sup>-1</sup>
- Ideal Gas Law = (PV=mRT)

$$A \approx 0.81 \cdot (b \cdot h)$$

All dimensions in mm

Figure 3

Question 2

- (a) Describe the fluid flow phenomena occurring on the front car bonnet A, B and C as shown in Figure 1. Is this a desirable phenomenon? Discuss the effects on overall vehicle performance.

(6 marks)

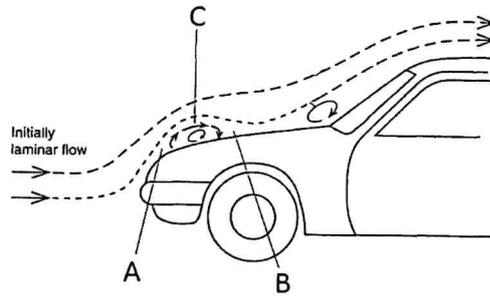

Figure 4

- (b) Briefly explain and label each section A, B, C, D and E of the open circuit wind tunnel shown in Figure 5.

(10 marks)

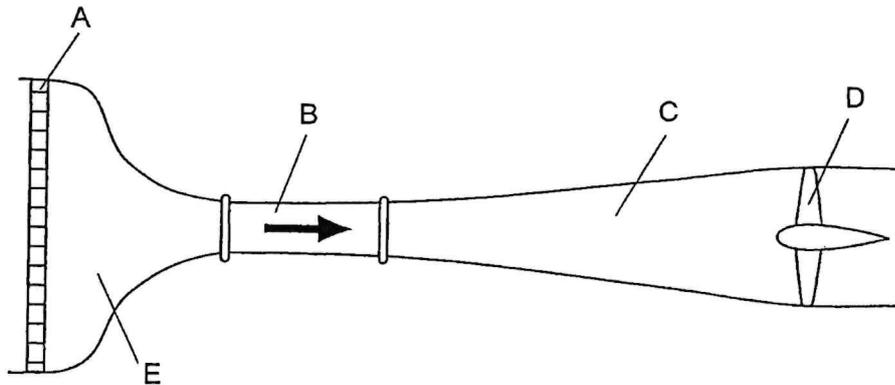

Figure 5

(c) A billboard sign shown in Figure 6 is to be designed to withstand a hurricane of up to 150 km/h. It was designed with a 50 cm diameter pole.

- i. Determine the drag coefficient & drag force at the billboard wall and 50 cm diameter pole.

(6 marks)

- ii. Determine the total moment in (Nm) at the base on the ground due to the aerodynamic loading.

(3 marks)

Take density of air  $\rho = 1.20 \text{ kg/m}^3$

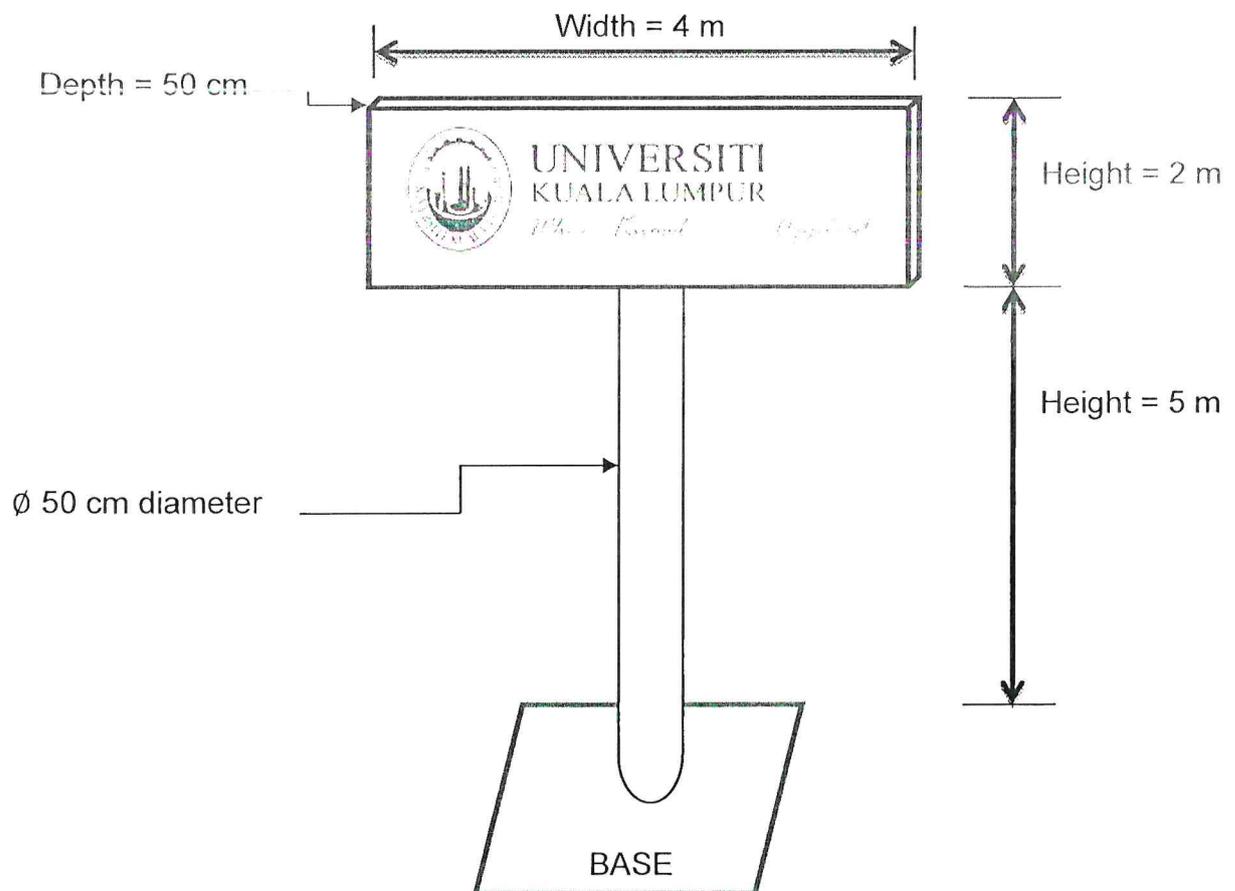

Figure 6

Question 3

(a) What can you suggest to the next generation vehicle designer to improve the overall aerodynamic drag coefficient of the vehicle shown in Figure 7? Sketch your design.

(10 marks)

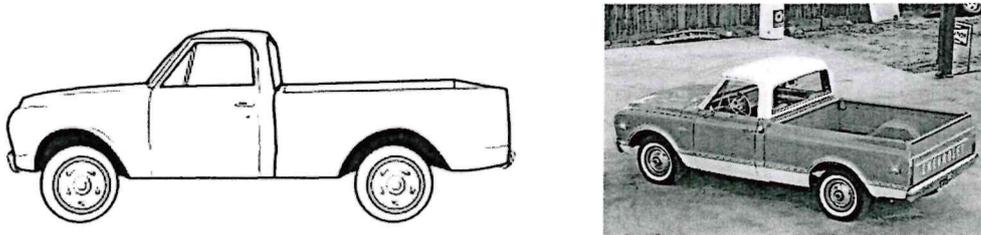

Figure 7

(c) An aircraft has a weight of 2400 kg and has a cruising speed of 215 km/h. The wing dimensions are: chord length = 1.2 m and wingspan = 12 m. The wing section has been tested in the wind tunnel and resulting Lift and Drag coefficient has been established in Figure 8. Take density of air  $\rho = 1.20 \text{ kg/m}^3$

i. Determine the required angle of attack of the wing at cruising speed.

(5 marks)

ii. What is the corresponding drag force at cruising speed?

(5 marks)

iii. What is the required engine power for the aircraft at cruising speed?

(5 marks)

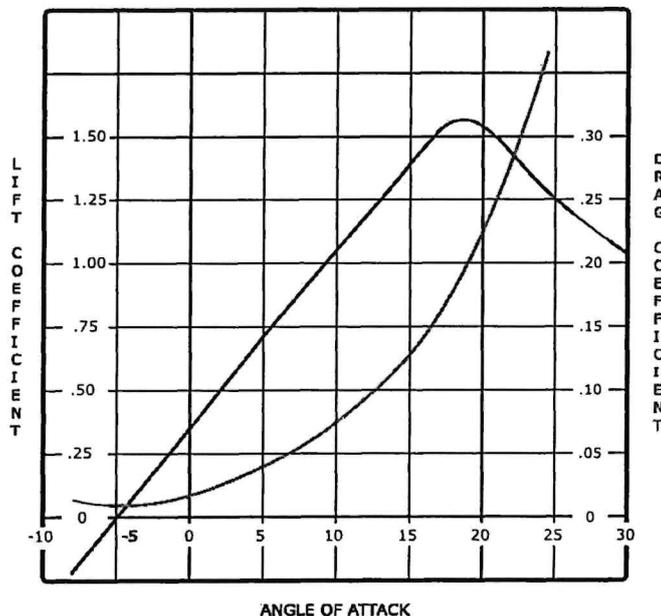

Figure 8

Question 4

(a) Choose the best configuration with the lowest drag coefficient for the design shown in Figure 9. Discuss your answer.

(10 marks)

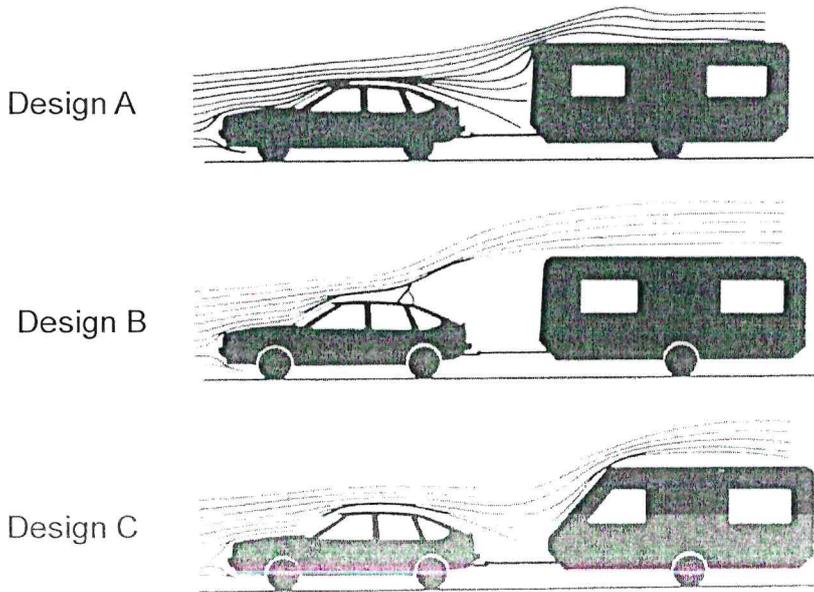

Figure 9

(a) The average pressure and shear stress acting on the surface of the flat circular disc with a diameter of 0.75 m plate are as indicated in the Figure 10. Determine the lift and drag generated by the plate. Sketch also the expected lift and drag vector direction.

(15 marks)

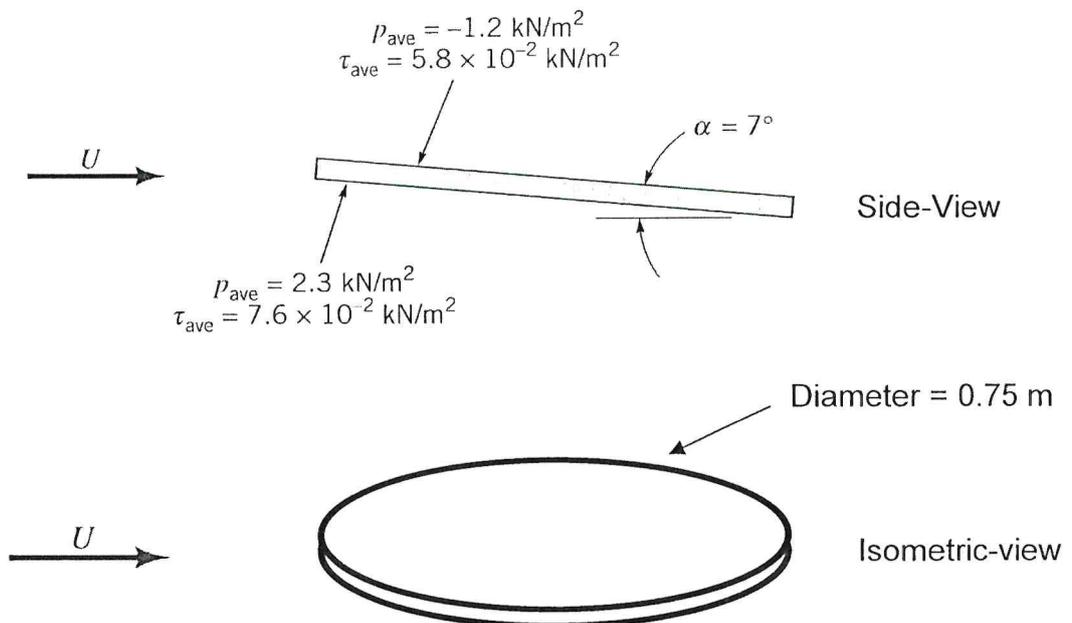

Figure 10

Question 5

(d) An MPV shown in Figure 11 is to be fitted with overhead carrier for luggage. The vehicle travels 40,000 km per year at 100 km/h average speed. The carrier has a dimension of Length (L) of 200 cm; Height (H) is 80 cm; and Width (W) of 120 cm.

Data

Heating Value of Petrol = 45000 kJ/kg

Density of Petrol = 750 kg/m<sup>3</sup>

Petrol Price = RM 2.05 /L

Density of air = 1.2 kg/m<sup>3</sup>

Engine efficiency = 30 %

- i. Find the increase in drag force endured by the MPV. (6 marks)
- ii. Determine the increase in the amount of fuel used by the vehicle per year. (6 marks)
- iii. If petrol cost is RM 2.30 per liter, calculate the extra cost of installing luggage carrier. (6 marks)
- iv. Sketch any design change you would recommend for the luggage carrier. (7 marks)

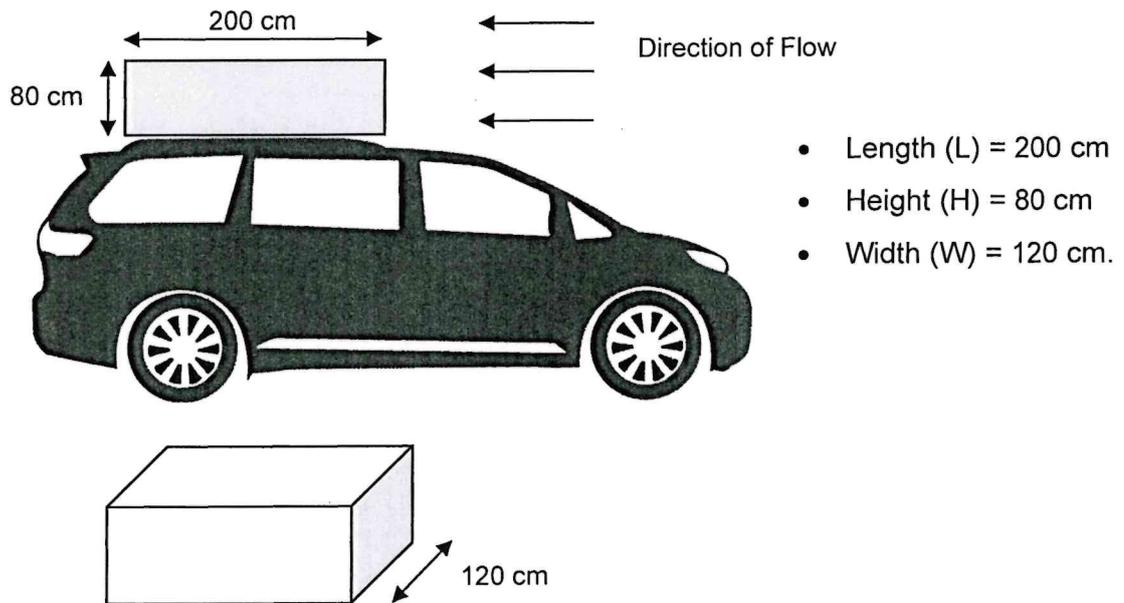

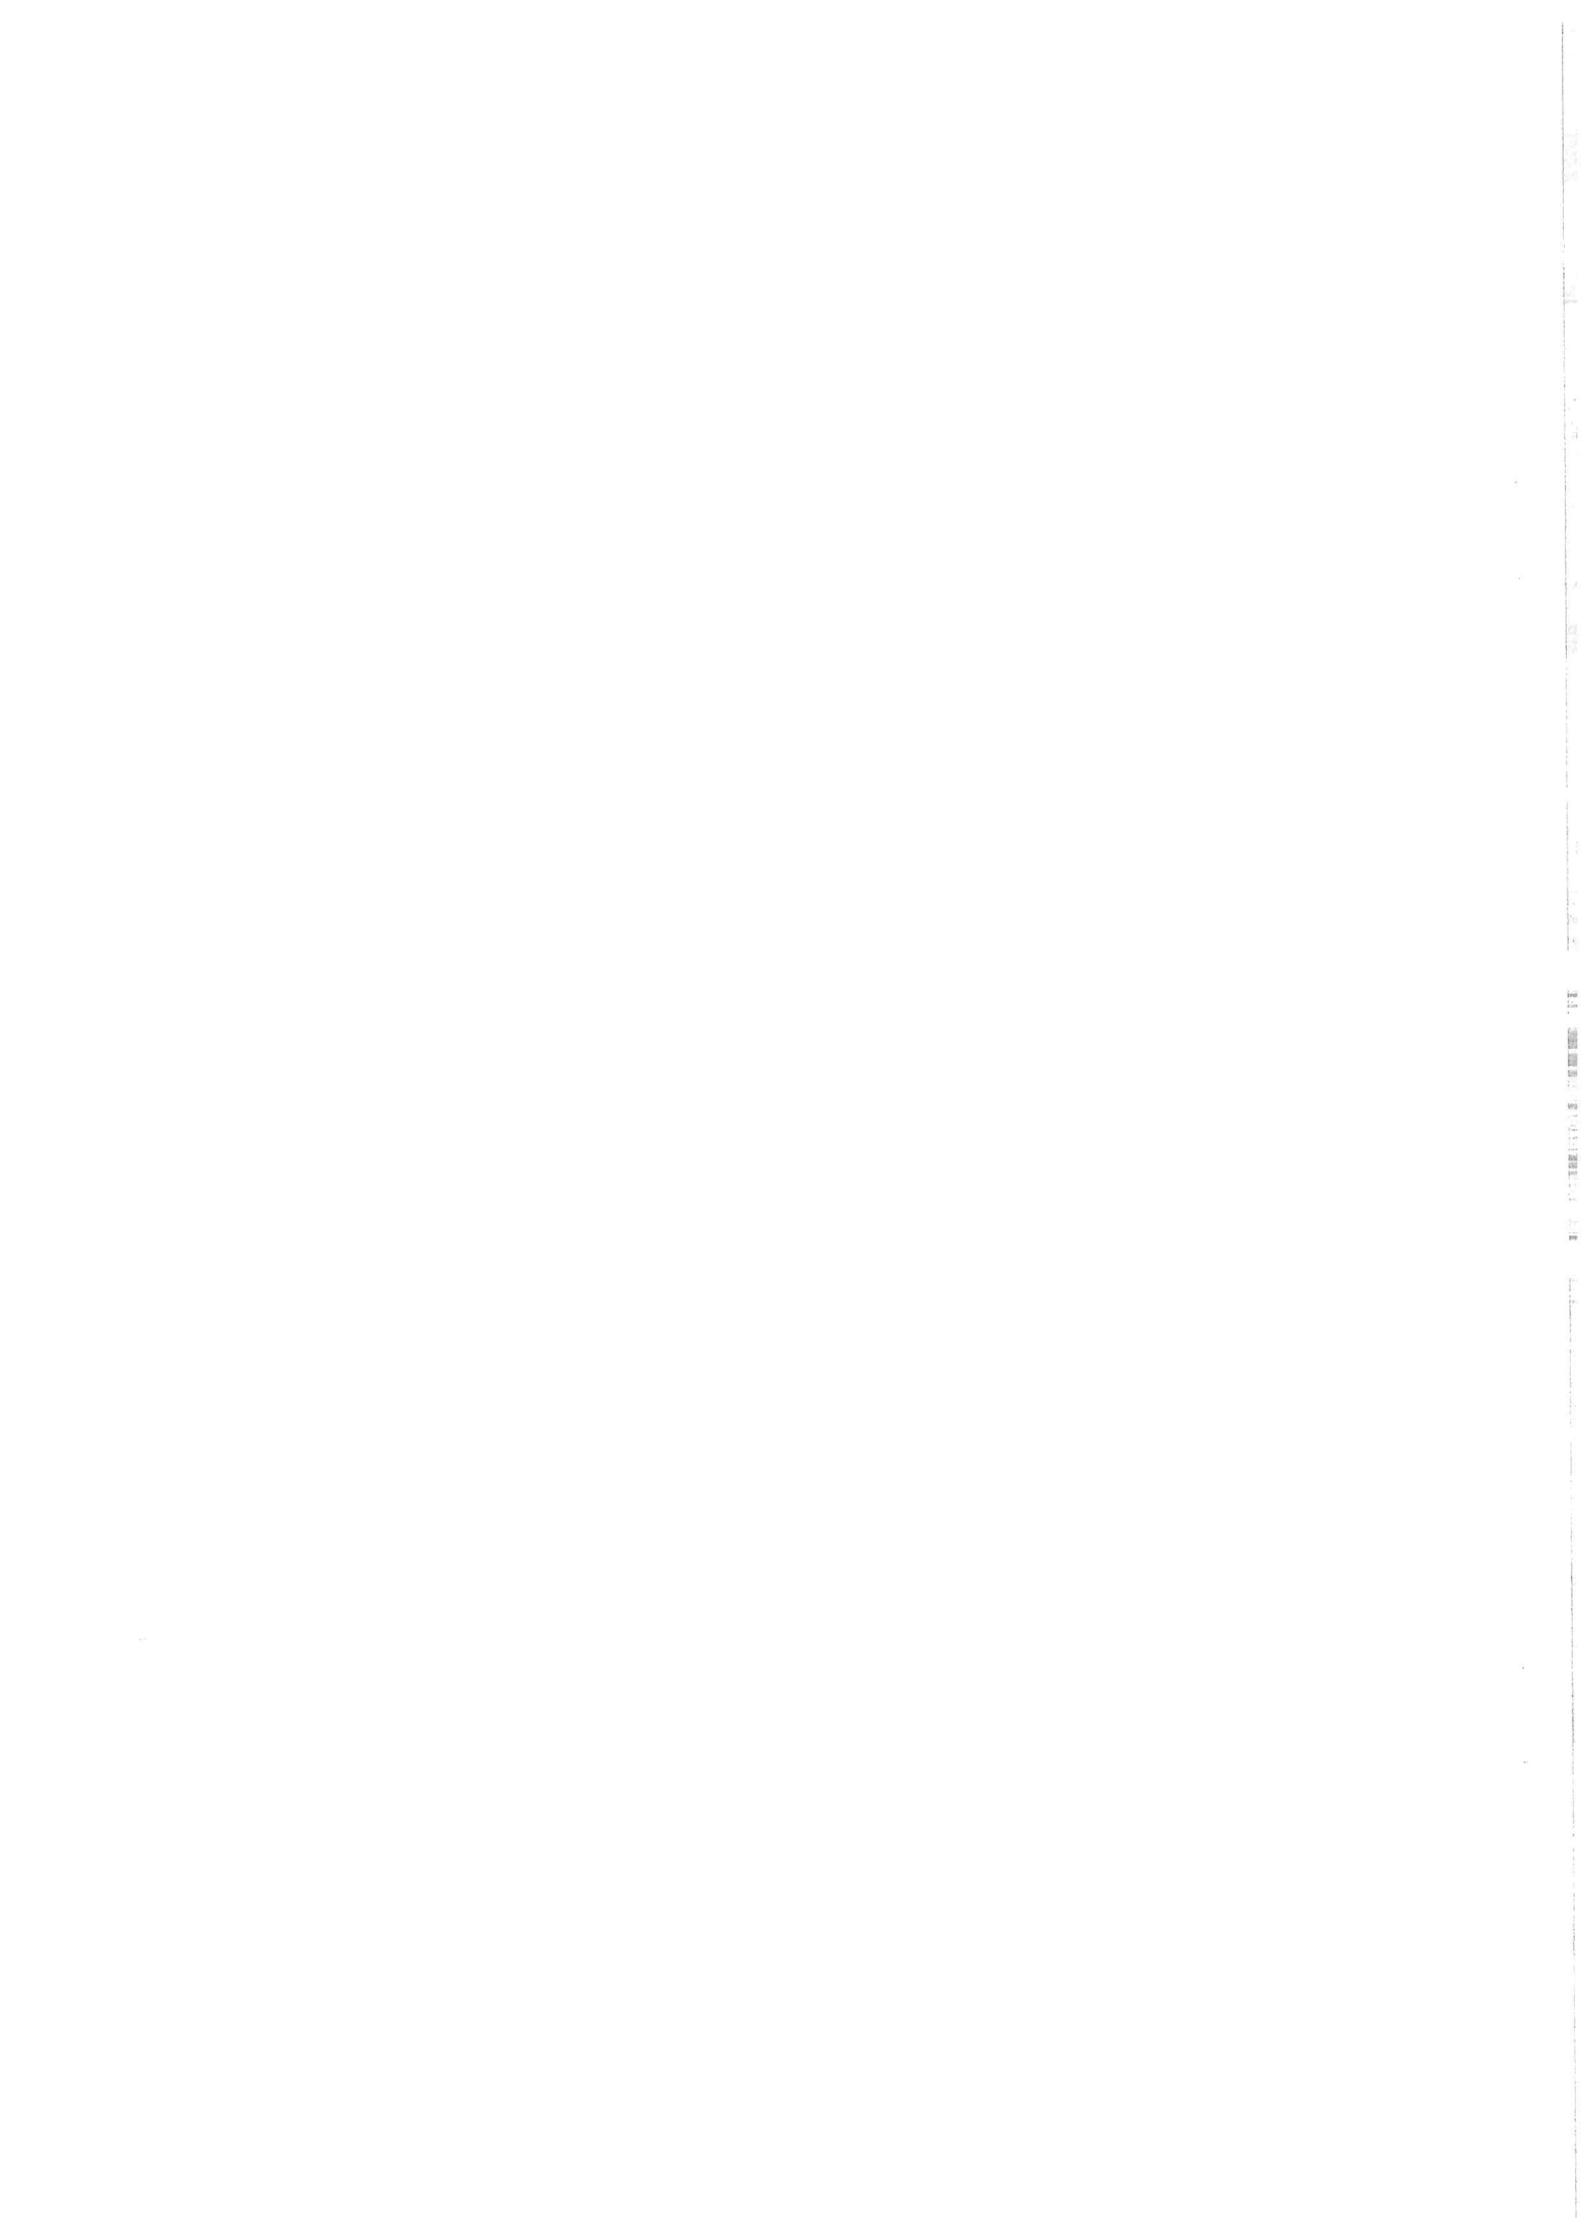

Figure 11

END OF EXAMINATION PAPER

### 2D Objects

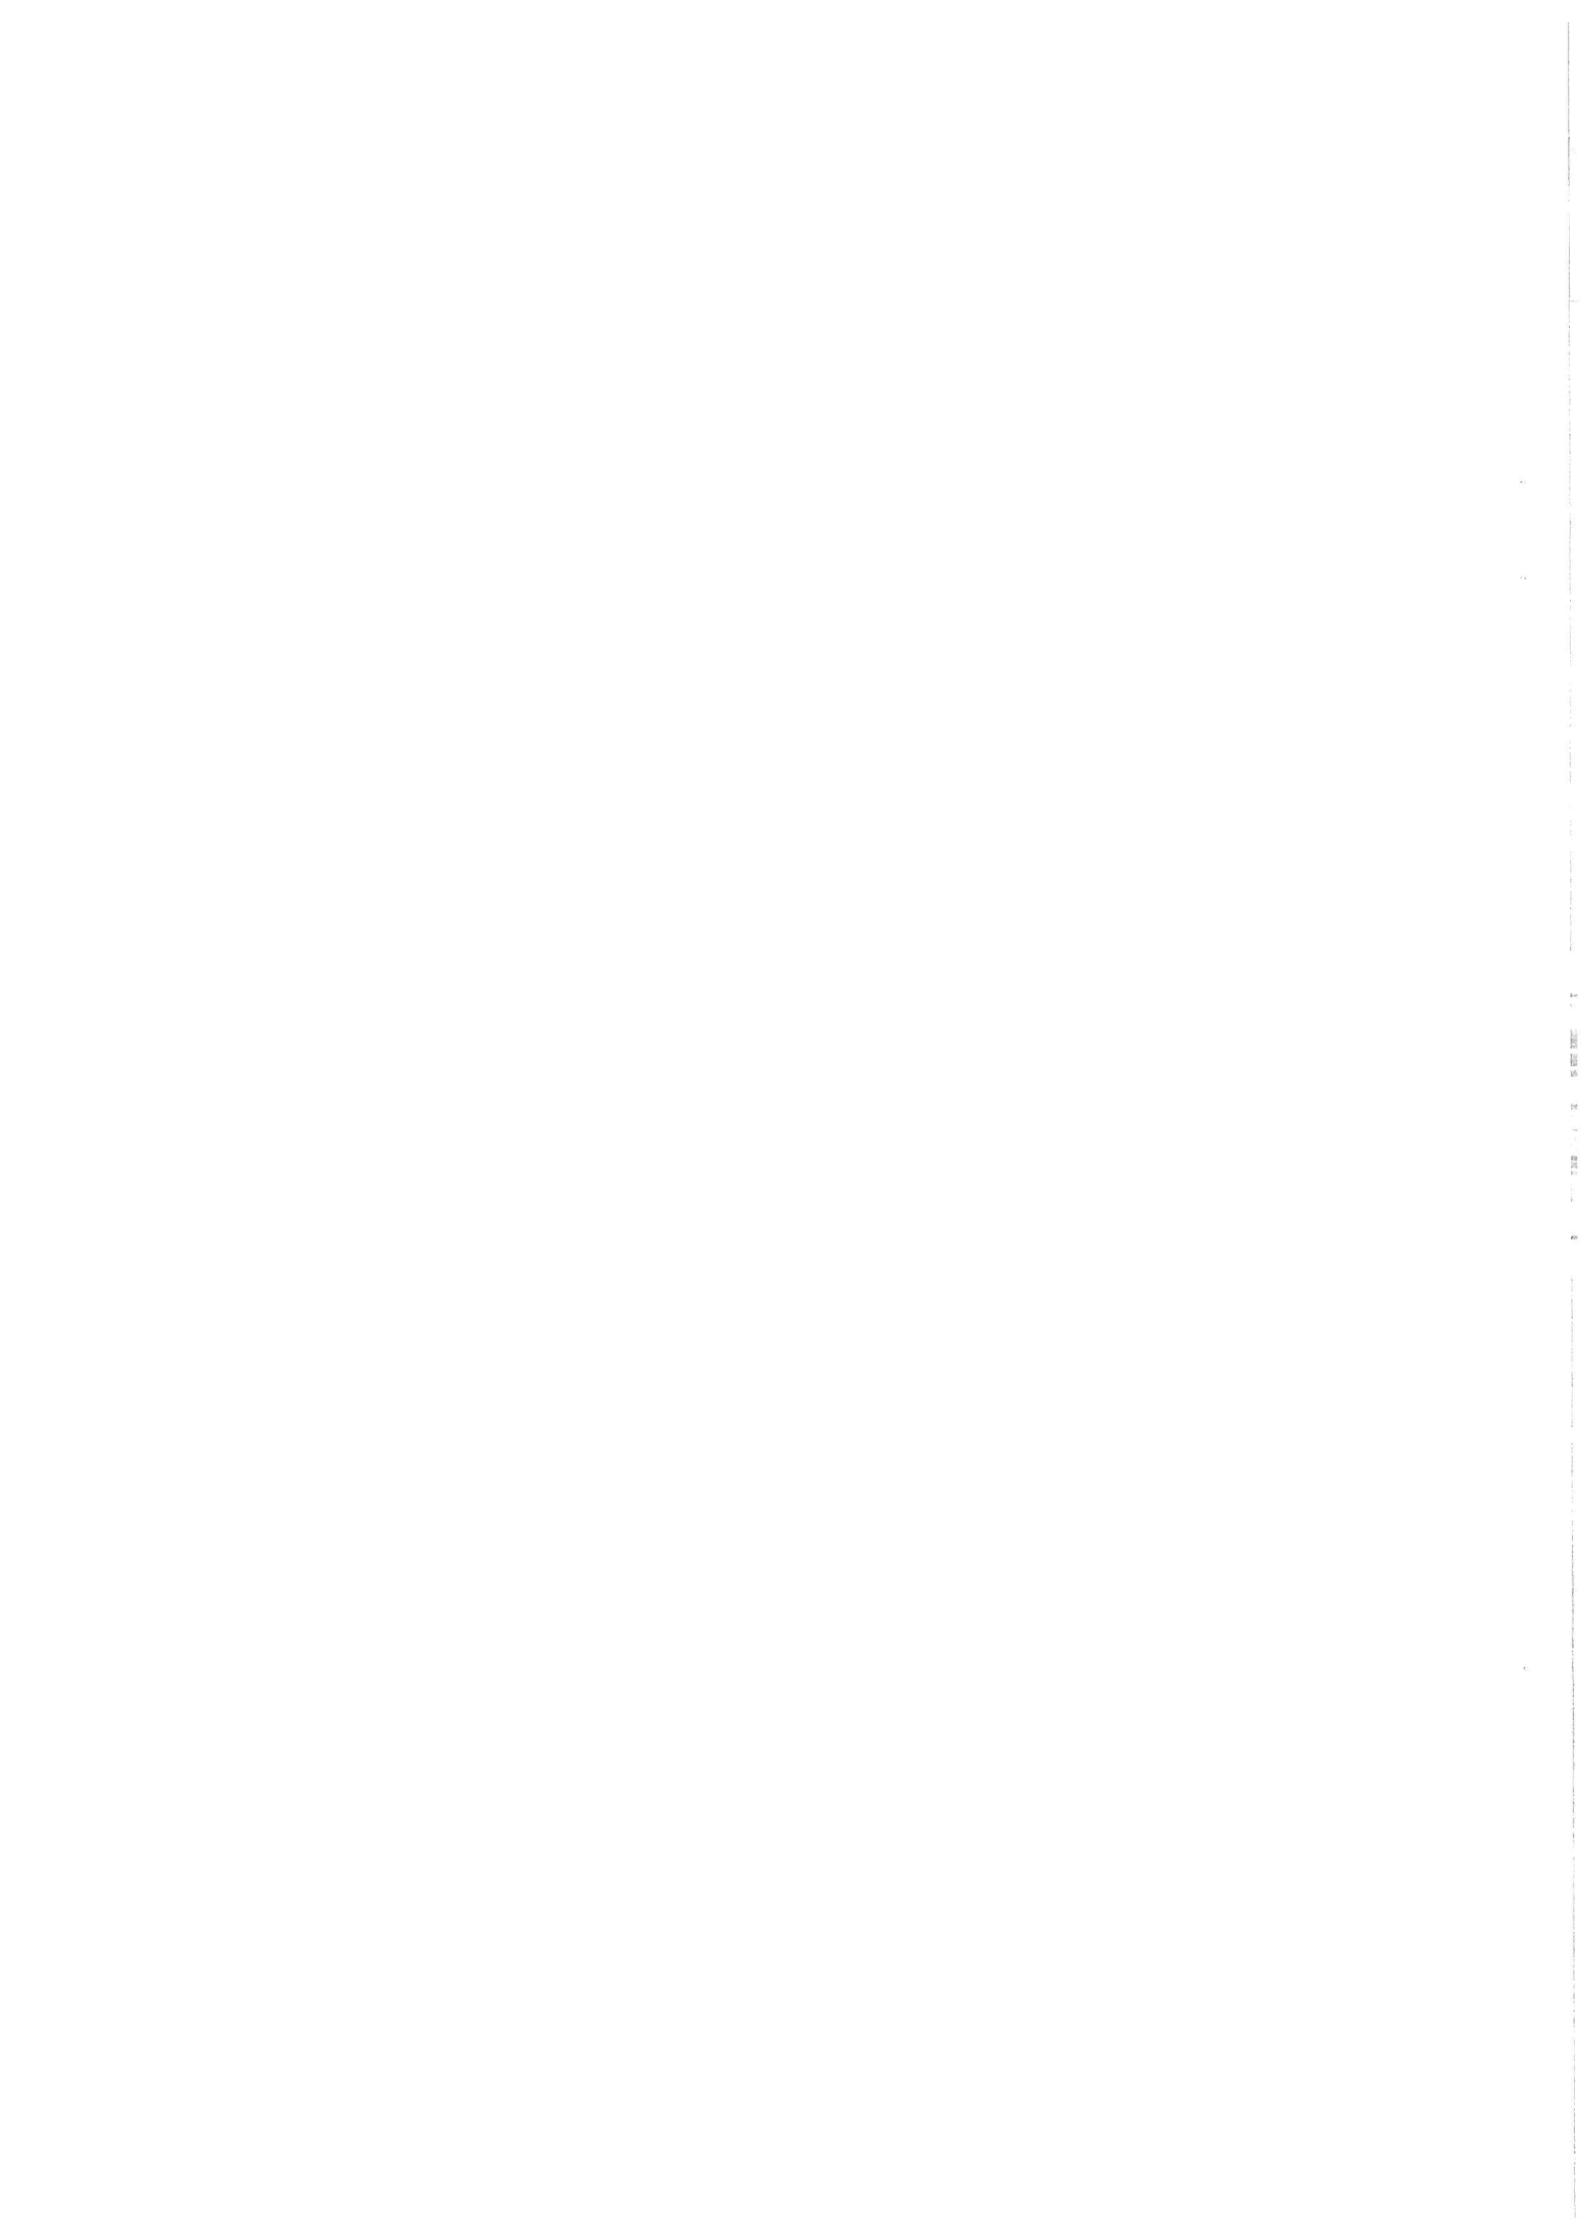

Drag coefficients  $C_D$  of various two-dimensional bodies for  $Re > 10^4$  based on the frontal area  $A = bD$ , where  $b$  is the length in direction normal to the page (for use in the drag force relation  $F_D = C_D A \rho V^2 / 2$  where  $V$  is the upstream velocity)

<p><b>Square rod</b></p> <p>Sharp corners: <math>C_D = 2.2</math></p> <p>Round corners (<math>r/D = 0.2</math>): <math>C_D = 1.2</math></p>	<p><b>Rectangular rod</b></p> <p>Sharp corners:</p> <table border="1"> <thead> <tr> <th><math>L/D</math></th> <th><math>C_D</math></th> </tr> </thead> <tbody> <tr> <td>0.0*</td> <td>1.9</td> </tr> <tr> <td>0.1</td> <td>1.9</td> </tr> <tr> <td>0.5</td> <td>2.5</td> </tr> <tr> <td>1.0</td> <td>2.2</td> </tr> <tr> <td>2.0</td> <td>1.7</td> </tr> <tr> <td>3.0</td> <td>1.3</td> </tr> </tbody> </table> <p>* Corresponds to thin plate</p> <table border="1"> <thead> <tr> <th><math>L/D</math></th> <th><math>C_D</math></th> </tr> </thead> <tbody> <tr> <td>0.5</td> <td>1.2</td> </tr> <tr> <td>1.0</td> <td>0.9</td> </tr> <tr> <td>2.0</td> <td>0.7</td> </tr> <tr> <td>4.0</td> <td>0.7</td> </tr> </tbody> </table> <p>Round front edge:</p>	$L/D$	$C_D$	0.0*	1.9	0.1	1.9	0.5	2.5	1.0	2.2	2.0	1.7	3.0	1.3	$L/D$	$C_D$	0.5	1.2	1.0	0.9	2.0	0.7	4.0	0.7
