

**CONFIDENTIAL**

**SET A**

**UNIVERSITI KUALA LUMPUR  
Malaysia France Institute**

**FINAL EXAMINATION**

**JULY 2010 SESSION**

---

**SUBJECT CODE** : FMD 11102  
**SUBJECT TITLE** : MACHINE ELEMENT  
**LEVEL** : DIPLOMA  
**TIME / DURATION** : 9.00 am – 11.00 am  
( 2 HOURS )  
**DATE** : 16 NOVEMBER 2010

---

**INSTRUCTIONS TO CANDIDATES**

1. Please read the instructions given in the question paper CAREFULLY.
2. This question paper is printed on both sides of the paper.
3. Please write your answers on the answer booklet provided.
4. Answer should be written in blue or black ink except for sketching, graphic and illustration.
5. This question paper consists of TWO (2) sections. Section A and B. Answer all questions in Section A. For Section B, answer two (2) questions only.
6. Answer all questions in English.
7. Formulae are appended.

---

THERE ARE 6 PAGES OF QUESTIONS, 8 PAGES APPENDICES OF FORMULAE EXCLUDING THIS PAGE.

---

**SECTION A (Total: 60 marks)**

**INSTRUCTION:** Answer ALL questions.  
Please use the answer booklet provided.

**Question 1**

Named the gear types in figures 1 (a) to 1 (d) below.

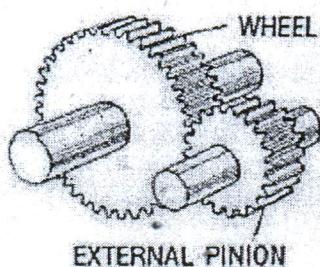

Figure 1 (a)

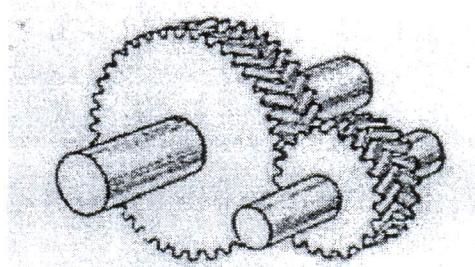

Figure 1 (b)

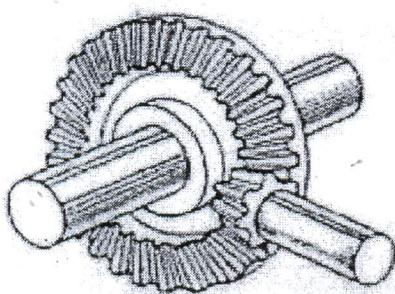

Figure 1 (c)

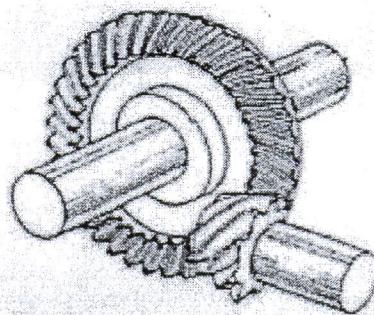

Figure 1 (d))

(10 Marks)

**Question 2**

Sketch a simple Adjustable Speed Drives and explain briefly on the mechanism.

(10 marks)

**Question 3**

Referring to figure 3 (a) below, describe the Shaft Alignment by using Feeler Gauge and Straight Edge methods.

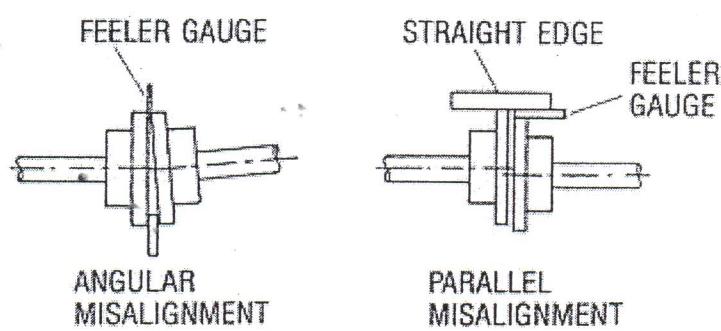

Figure 3 (a).

(10 marks)

**Question 4**

Named both coupling on Figure 4 (a) and 4 (b) below and describe briefly the advantage of both.

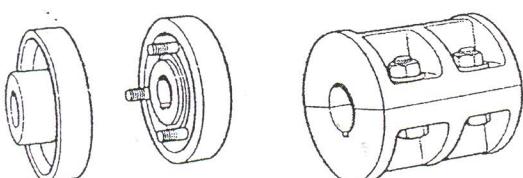

Figure 4 (a)

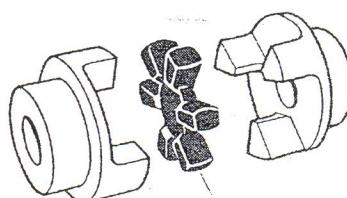

Figure 4 (b)

(10 marks)

**Question 5**

Given below Single Plate Clutch in Figure 5 (a) and Multiple Plate Clutch in Figure 5 (b). Describe briefly 3 main comparisons of these clutches.

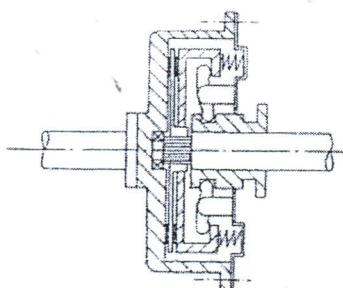

Figure 5 (a)

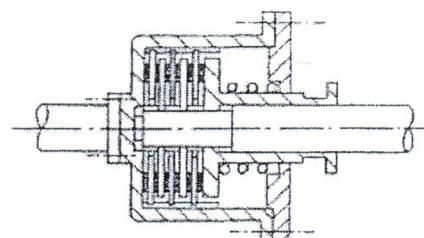

Figure 5 (b)

(10 marks)

**Question 6**

*"Equipment overloads can occur for many different reasons and are particularly likely to occur when extra output is required. Increased speeds, feed rates, operating temperature and pressure can all create overload conditions which lead to machine elements such as bearing to perform above the design limits."*

Describe briefly symptoms on a plain journal bearing that has undergone an overload operation as described above.

(10 marks)

**SECTION B (Total: 40 marks)****INSTRUCTION: Answer Two (2) of (3) Questions ONLY.****Please use the answer booklet provided.****Question 7**

A fan is belt driven by an electric motor running at 1500 rpm. The pulley diameters for the fan and motor are 500 and 355mm, respectively. A flat belt has been selected with a width of 100mm, thickness of 3.5mm, coefficient of friction of 0.8, density of  $1100 \text{ kg/m}^3$  and permissible stress of  $11\text{MN/m}^2$ . The centre distance is 1500mm. Determine the power capacity of the belt.

- a) What is the arc of contact of larger pulley? (2.5 marks)
- b) What is the arc of contact of smaller pulley. (2.5 marks)
- c) What is the maximum tension of the tight side of the belt. (2.5 marks)
- d) What is the velocity of the belt. (2.5 marks)
- e) What is the mass per unit length of the belt? (2.5 marks)
- f) What is the centrifugal Force that react on the belt? (2.5 marks)
- g) What is the centrifugal load? (2.5 marks)
- h) What is the power capacity of the system? (2.5 marks)

**Question 8**

Select a wedge belt and determine the pulley diameters for a reciprocating compressor driven by a 28kW two-cylinder diesel engine. The engine speed is 1500 rpm and the compressor speed is 950 rpm. The proposed distances between the engine and compressor shaft centers are approximately 1.5 m. The system is expected to be used for less than 10 hours per day.

- a) What is the speed ratio? (1 marks)
- b) What is the service factor?(please refer to the appendixes) (1 marks)
- c) What is the design power?(Please refer to appendixes) (1 marks)
- d) What is the minimum pulley suits the drives? (Please refer to appendixes) (1 marks)
- e) What is the actual pulleys diameter of driver and driven, the exact center distance of the pulleys, the belt length and the arc correction factor? (Please refer to appendixes) (8 marks)
- f) What is the rated power per belt? (Please refer to appendixes) (1 marks)
- g) What is the additional power for the belt? (Please refer to appendixes) (2 marks)
- h) What is the corrected power for the belt? (Please refer to appendixes) (2 marks)
- i) What is the number of the belt to be used? (3 marks)

**Question 9**

A chain drive is required for a gear pump operating at 400 rpm driven by a 5.5 kW electric motor running at 1440 rpm. The centre distances between the motor and pump shafts is approximately 470mm.

- a) What is the desired reduction ratio? (2 marks)
- b) What is the application ratio? (Please refer to the table given in the appendix.) (2 marks)
- c) What is the nearest sprocket ratio available and give the size of driver and driven sprocket. (Please refer to the table given in the appendix.) (6 marks)
- d) State the tooth factor. (2 marks)
- e) Calculate the selection power. (2 marks)
- f) Using the BS/ISO selection chart given in the appendix, state the best chain types to be used. (2 marks)
- g) Calculate the length of the chain in pitches. (2 marks)
- h) Calculate the exact center distance of the sprocket. (2 marks)

**END OF QUESTION**

## APPENDICES

## Formulae:

$$m = \frac{P}{\pi} = \frac{D_o}{t}$$

Service factor of the belt table.

Table 8.2 Service factors

Types of driven machine	Type of prime mover					
	<10	10-16	>16	<10	10-16	>16
Light duty, e.g. agitators (uniform density), blowers, exhausters and fans (up to 7.5 kW), centrifugal compressors, rotodynamic pumps, uniformly loaded belt conveyors	1.0	1.1	1.2	1.1	1.2	1.3
Medium duty, e.g. agitators (variable density), blowers, exhausters and fans (over 7.5 kW), rotary compressors and pumps (other than centrifugal), nonuniformly loaded conveyors, generators, machine tools, printing machinery, sawmill machinery	1.1	1.2	1.3	1.2	1.3	1.4
Heavy duty, e.g. brick machinery, bucket elevators, reciprocating compressors and pumps, heavy duty conveyors, hoists, pulverizers, punches, presses, quarry plant, textile machinery	1.2	1.3	1.4	1.4	1.5	1.6
Extra heavy duty, e.g. crushers	1.3	1.4	1.5	1.5	1.6	1.8

After Fenner Power Transmission UK.

$$\text{Speed Ratio} = \frac{\text{Driver RPM}}{\text{Driven RPM}}$$

$$\text{Design Power} = \text{Given Power} \times \text{Service Factor}$$

Corrected value for the power = (rated power + additional power) X arc length correction factor

$$\text{Total Number of Belts} = \frac{\text{Design Power}}{\text{Corrected Value for Power}}$$

**Table 8.10 Application factor**

Driven machine characteristics	Driver characteristics		
	Smooth running, e.g. electric motors, IC engines with hydraulic coupling	Slight shocks, e.g. IC engines with more than six cylinders, electric motors with frequent starts	Heavy shocks, e.g. IC engines with less than six cylinders
Smooth running, e.g. fans, pumps, compressors, printing machines, uniformly loaded conveyors	1.0	1.1	1.3
Moderate shocks, e.g. concrete mixing machines, non-uniformly loaded conveyors, mixers	1.4	1.5	1.7
Heavy shocks, e.g. planars, presses, drilling rigs	1.8	1.9	2.1

**Table 8.9 Chain reduction ratios as a function of the standard sprockets available**

Number of teeth in the driven sprocket $N_2$	Number of teeth in the drive sprocket $N_1$					
	15	17	19	21	23	25
25	—	—	—	—	—	1.00
38	2.53	2.23	2.00	1.80	1.65	1.52
57	3.80	3.35	3.00	2.71	2.48	2.28
76	5.07	4.47	4.00	3.62	3.30	3.04
95	6.33	5.59	5.00	4.52	4.13	3.80
114	7.60	6.70	6.00	5.43	4.96	4.56

Reproduced from Renold, 1996.

$$L = \frac{N_1 + N_2}{2} + \frac{2C}{p} + \frac{(N_2 - N_1)^2}{2\pi} \frac{p}{C}$$

$$C = \frac{p}{8} \vec{2L} - N_2 - N_1$$

$$+ \sqrt{(2L - N_2 - N_1)^2 - \frac{\pi}{3.88} (N_2 - N_1)^2}$$

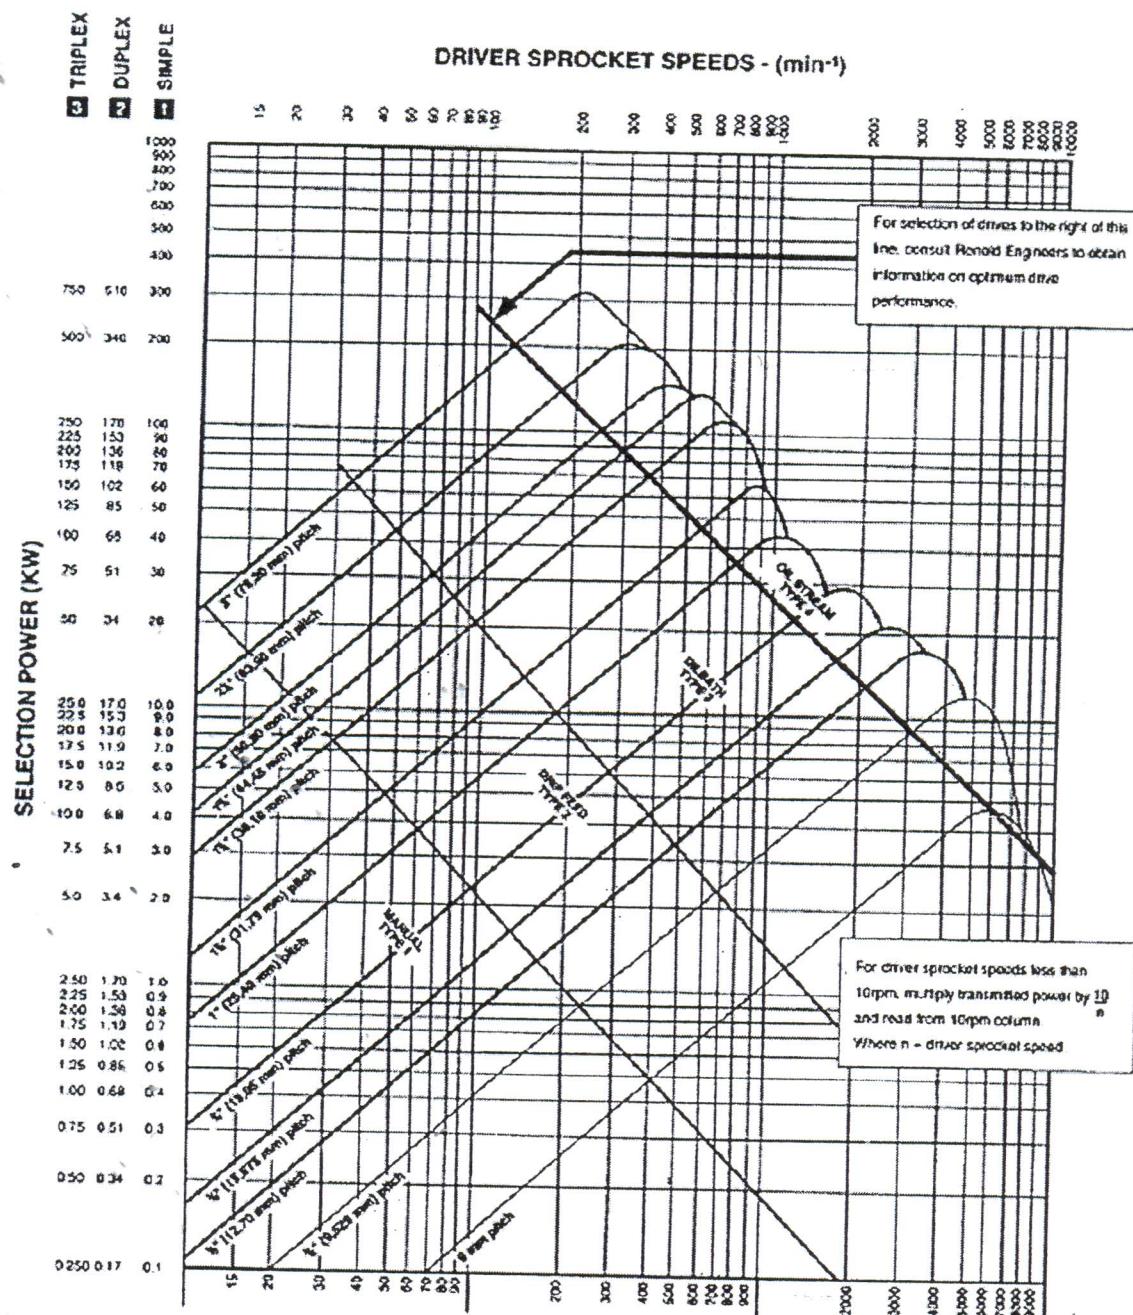

Figure 8.15 British Standard chain drives rating chart using 19 tooth drive sprocket (courtesy of Renold Chain).
